## DETAILED ACTION

### *Double Patenting*

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-29 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-32 of U.S. Patent No. 5,422,653. Although the conflicting claims are not identical, they are not patentably distinct from each other because claims 1-29 of the present invention are broader than claims 1-32 of the U.S. Patent No. 5,422,653.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Milgram et al (5,175,616).

Regarding claim 1, Milgram et al disclose (Figs. 1, 7 and 8) a method, comprising the steps of:

receiving an image signal (pointer image 371), and  
providing, in response to the image signal, a mixed image signal (Fig. 1, a composite image signal 23) for providing simulated active percepts for passive perception (Fig. 7 shows the simulated scene (simulated active percepts) is being viewed through a pair of stereoscopic video cameras 14 and 16 (passive perception). See column 8, lines 6-11 and 44-46.

### ***Response to Arguments***

Applicant's arguments filed September 29, 2005 have been fully considered but they are not persuasive.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a "passive viewer" means one whose body, head or visual axis may analogously follow the body, head or visual axis of an observer by following simulated active percepts (Page 4)) are not recited in the rejected claim 1. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).

Applicant further argues that Milgram et al does not disclose a "mixed image". However, examiner respectfully disagrees.

Milgram et al clearly teaches "In accordance with the present invention, this is achieved by providing a method and an apparatus which synchronously superimposes a virtual, stereographic graphic pointer video signal onto the video signal of a remote environment so as to allow the two signals to be displayed together as a single combined video signal on a single viewing screen" (Column 4, lines 3-9).

Therefore, based on the above teachings, the superimposed image or the combined image is the claimed "mixed image". See also column 8, lines 6-11 and 44-46.

In response to applicant's argument that the references fail to show certain features of applicant's invention, it is noted that the features upon which applicant relies (i.e., a "mixed image" as define in the specification...comprising one or more images of simulated active percepts having areas of greater and lesser resolution together being simulative of foveal resolution (emphasis added) ) are not recited in the rejected claim 1. Although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims. See *In re Van Geuns*, 988 F.2d 1181, 26 USPQ2d 1057 (Fed. Cir. 1993).
